

Yasmeen Toussi

Moorpark, CA | 858.269.9033 | yasmeentoussi@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

UC Berkeley Computer Science graduate with hands-on experience in humanoid robotics data operations, technical troubleshooting, public-sector IT support, machine learning, and UI/UX research. Comfortable working across hardware, software, sensors, data quality, and user support, with a practical approach to isolating failures and getting systems running again.

EDUCATION

University of California, Berkeley — B.A. Computer Science

May 2026

Berkeley, CA

Relevant Coursework: Data Structures & Algorithms; Artificial Intelligence; Computer Security; Computer Architecture; Internet Architecture & Protocols; Programming Languages & Compilers; User Interface Design & Development; Discrete Mathematics & Probability; Calculus I–III; Linear Algebra & Differential Equations; Physics I–III with Lab; Object-Oriented Programming; RISC-V Assembly.

EXPERIENCE

Electrical Assembler / Helix Data Creator — Figure AI via Insight Global

Aug 2026 – Present

Los Angeles, CA | Robotics & AI Operations | FigXR2, VR/Pico motion tracking, wearable sensors, Atlassian Jira

- Run humanoid-robot data collection workflows with FigXR2, VR/Pico hardware, wrist trackers, calibration boards, cameras, and wearable sensors to capture repeatable human-motion demonstrations used for embodied AI training.
- Troubleshoot rejected calibrations, tracker orientation and left/right mapping, camera visibility, connectivity, and equipment alignment; isolate the failure, correct the setup, and validate the session before collection resumes.
- Check sensor placement, tracking stability, and capture consistency; log technical issues, attempted fixes, and handoff notes in Atlassian Jira and coordinate recurring problems with field specialists and shift leads.

UI/UX Design & Research Intern — CAVIAIR / Neoboard

Jun 2026 – Sep 2026

Remote | Figma, Atlassian Jira, Otter.ai

- Rebuilt professor and administrator analytics dashboards as editable low-fidelity Figma wireframes for risk assessment, assignments, submission patterns, student activity, and academic-integrity review.
- Designed the StylosTracer evidence-review flow with side-by-side comparisons, revision history, LMS metadata, reference context, and reliability explanations; interviewed faculty and administrators and tracked resulting design changes in Jira.

Web Design & Development Project — ShopAhoj

Jan 2026 – May 2026

Camarillo, CA | HTML, CSS, PHP, Figma, GitHub Pages, AwardSpace | [Live Site](#)

- Redesigned and rebuilt the nonprofit's front end, simplifying navigation, service information, contact flows, and calls to action so the site was easier to understand and use.
- Turned stakeholder feedback into polished UI changes and shipped the approved work into the organization's live hosting workflow.

College Student Worker — County of Ventura Public Works Agency

Dec 2021 – Jun 2024

Ventura, CA | IT Department and Water & Sanitation Billing

- Supported county employees during a four-month IT assignment by resolving password and account problems, printer failures, Microsoft Office issues, and day-to-day workstation questions; documented fixes and maintained hardware inventory records.
- Built a lightweight automation that replaced a repetitive Adobe Acrobat filing process, cutting work that took hours down to minutes and reducing manual file handling.
- Used Google Analytics to guide county web updates and public-service notices; managed digital records, service requests, reports, and account changes for 500+ utility customers while reducing repeat follow-ups through clear support.

PROJECTS

GISlice League — Geospatial Data & Machine Learning

Jan 2026 – May 2026

Python, pandas, NumPy, scikit-learn, JavaScript, Mapbox, QGIS, Git | [GitHub](#)

- Built a geospatial data pipeline and interactive Mapbox experience that combined census, demographic, and grocery-access data across San Francisco, Oakland, and Berkeley.
- Implemented and validated a linear regression model with feature engineering, standardization, and 5-fold cross-validation, then connected the results to the map so underserved areas were easier to identify and interpret.

Catter — Cat Adoption Matching Web App

Aug 2025

React, Node.js, LLM API, Figma, Git

- Built a swipe-based web app that ranks adoptable cats from a lifestyle questionnaire and uses an LLM API to generate personalized recommendations from each user's preferences.
- Worked in a four-person Git workflow and translated Figma prototypes into product features, including the matching flow and swipe-based browsing experience.

Secure File Sharing — Security Engineering Project

Oct 2025

Go, applied cryptography

- Implemented per-file keys, encrypt-then-MAC protection, and authenticated versioned headers to detect tampering and rollback attacks in a hostile datastore model.
- Built multi-user sharing and revocation with rotated keys, signed recipient grants, and owner-controlled writes.

TECHNICAL SKILLS

Programming: Python, JavaScript, SQL, Go, C, C++, OCaml, PHP, HTML/CSS, Scheme, RISC-V Assembly

AI, Data & Robotics: pandas, NumPy, scikit-learn, linear regression, cross-validation, LLM APIs, Mapbox, QGIS, robotics data collection, motion tracking, sensor calibration, FigXR2, VR/Pico hardware

IT & Operations: Hardware/software troubleshooting, user support, account and printer support, Microsoft 365, Google Workspace, Google Analytics, Adobe Acrobat, asset inventory, technical documentation

Tools & Frameworks: Atlassian Jira, Git, GitHub, Unix/Linux, React, Node.js, Figma, GitHub Pages, AwardSpace, Otter.ai, Logisim

Languages: English, Arabic, Turkish
